REPUBLIC OF SOMALILAND
Central Statistics Department

OFFICIAL RELEASE

Monthly Consumer Price Index January 2017

SOMALILAND CONSUMER PRICE INDEX

The Central Statistics Department of the Ministry of National Planning & Development (MoNP&D), has released the Consumer Price Index (Base year 2012=100).

Comparison of the CPI of January 2017 with the CPI of January 2016 (Y-o-Y)

The Annual Headline Inflation for the year ending January(Y-o-Y) 2017 was recorded at 0.7 percent where the annual food inflation was registered at 2.4 percent while the Non-food inflation was recorded at Minus 0.4 percent.

The [Y-o-Y] price changes for the divisions with positive annual inflation are as follows: “Food and Non-Alcoholic Beverages by 2.9 percent”; “Clothing and Footwear 0.2 percent”; “Furnishings, Household Equipment and Routine Household Maintenance 5.8 percent”; “Communication by 7.4 percent”, Restaurants and Hotels by 5.4 percent, “Miscellaneous goods and services 0.8 percent”.

On contrary, The [Y-o-Y] price changes for the divisions that registered a drop in the annual inflation below zero percent are the following: Alcoholic Beverages, Tobacco and Narcotics by minus 8.7 percent, “Housing, Water, Electricity, Gas and Other Fuels by 2.2 percent” “Health 19.6 percent”; “Transport” minus 16.5 percent; and “Education by 5.0 percent”, “Recreation and Culture: minus 16.7 percent;.

Comparison of the CPI of December 2016 with the CPI of January 2017 (M-o-M)

Monthly basis of the CPI Jan 2017 all items rise by 0.9 percent as a result of a increase in prices, food prices decrease by 1.3 percent and non food prices increase 0.7 percent.

An analysis on [M-o-M] basis of CPI for December 2016 compared with that of January 2017, shows that there are eight divisions, whose prices have generally declined, while the remaining four divisions their prices have generally rise up during the month of January 2017, as listed below:

Divisions whose prices have increasing are: “Communication” 1.8 percent; “Restaurants and Hotels” 0.9 percent, “Miscellaneous Goods and Services” 1.9 percent.

Divisions whose prices have decline are: “Food and Non-Alcoholic Beverages by 1.2 percent” Alcoholic Beverages, Tobacco and Narcotics” 2.7 percent; Clothing and Footwear” 1.5 percent; “Housing, Water, Electricity, Gas and Other Fuels” minus 2.6 percent; “Furnishings, Household Equipment and Routine Household Maintenance” 0.8 percent “Health minus 4.9 percent “Transport” minus 9.4 percent; Recreation and Culture” 0.8 percent”; and “Education” minus 1.5 percent.

For more details about historical CPI numbers and the corresponding Inflation see appendix 1: Attached.

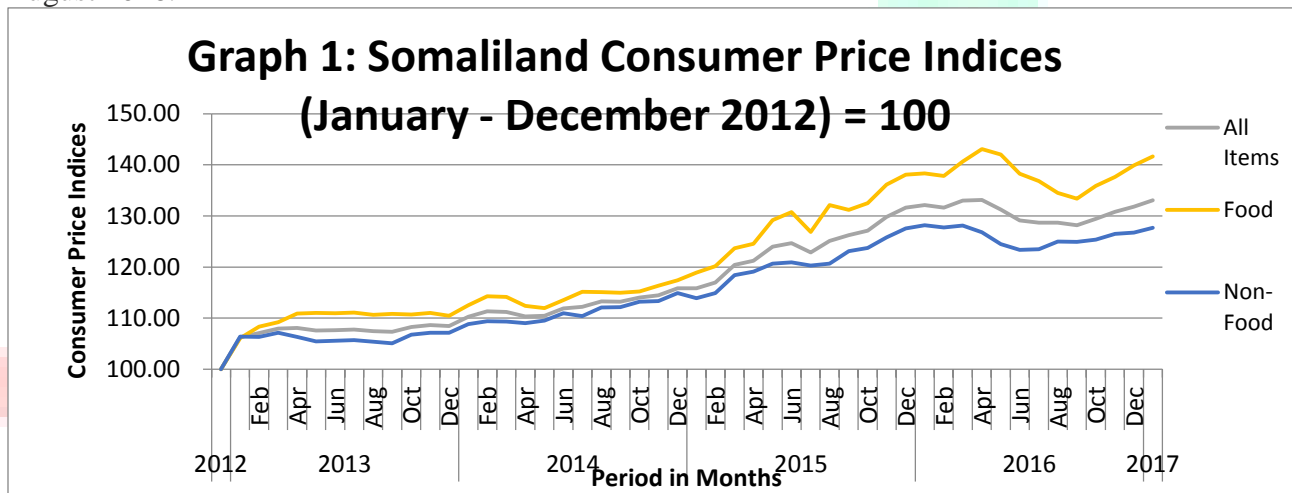

Table 1 below gives the CPI for January 2017 together with the inflation for Headline, food, non- food and all the 12 COICOP divisions.

Table 1 Base year 2012=100

COICOP Codes	Major Categories and Divisions	CPI Weights 2012 Calendar Year	Monthly Index Numbers			Inflation (Percentage Change) January 2017	
			January 2016	December 2016	January 2017	Y-o-Y (Annual)	M-o-M (Monthly)
	All Items (Headline)	1,000.0000	132.11	131.83	133.08	0.7	0.9
	Food	387.1043	138.34	139.89	141.65	2.4	1.3
	Non-Food	612.8957	128.18	126.74	127.66	-0.4	0.7
01	Food and Non-Alcoholic Beverages	417.4920	137.86	140.26	141.92	2.9	1.2
02	Alcoholic Beverages, Tobacco and Narcotics	45.5716	179.81	159.93	164.22	-8.7	2.7
03	Clothing and Footwear	57.3343	127.00	125.32	127.24	0.2	1.5
04	Housing, Water, Electricity, Gas and Other Fuels	141.0220	132.90	139.43	135.77	2.2	-2.6
05	Furnishings, Household Equipment and Routine Household Maintenance	55.4872	119.00	124.89	125.92	5.8	0.8
06	Health	25.5464	121.12	152.33	144.90	19.6	-4.9
07	Transport	88.5129	116.08	88.63	96.98	-16.5	9.4
08	Communication	29.9332	118.07	124.55	126.78	7.4	1.8
09	Recreation and Furniture	22.4557	122.85	101.42	102.27	-16.7	0.8
10	Education	36.8795	118.91	126.83	124.88	5.0	-1.5
11	Restaurants and Hotels	33.5201	111.76	116.65	117.74	5.4	0.9
12	Miscellaneous Goods and Services	46.2451	128.44	127.06	129.41	0.8	1.9

Graph 1: Somaliland Consumer Price Indices

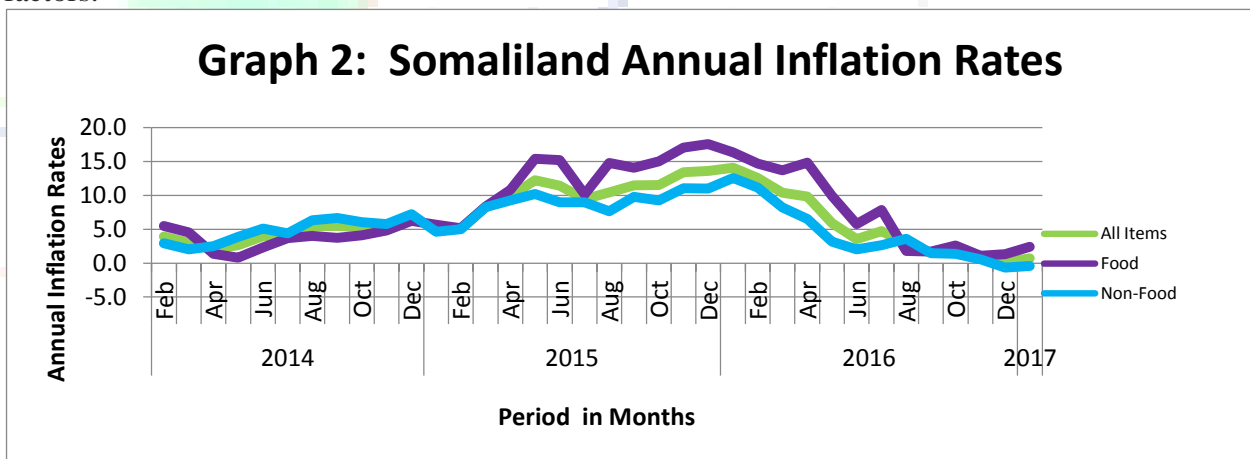

Graph 1 shows that price levels for food are still higher than those for non-food category through the entire period of index measurement. i.e. from January 2013 to January 2017 notwithstanding a persistent drop in the food prices during the months of May, June, July, August 2016.

Source: CSD, MoNP&D

Graph 2: Somaliland Annual Inflation Rates

Graph 2 also demonstrates that for the entire period i.e. January 2016 to January 2017, all the measured annual inflation are positive. This is an indication of persistent increase in consumer prices within the Somaliland economy which has a negative impact on the welfare of the households more especially those with a fixed income together with those with very low income and without any savings at all. The same graph shows that food prices were instable compared to non-food prices. Food prices changed more frequently and sharply mostly due the seasonal factors.

EXPLANATORY NOTES

1.1 CPI Weights:

The results of the 2012 Somaliland Household Survey (SHS) were used as a major source of data to compute weights for the Somaliland Consumer Price Index (CPI). The 2012 SHS was designed in such a way that household data was collected from the entire Somaliland. However, only the household final consumption expenditure data for the Hargeisa domain were analysed and used to compute the Somaliland CPI weights. This is due to the limited availability of resources.

The Somaliland CPI weights are based on the principal of Household Final Consumption (HFC) expenditure for Hargeisa. Both Monetary and non-monetary household final consumption were included during the computation of the Somaliland CPI weights.

The exclusion approach was used during the compilation of the Somaliland CPI weights. Thus, all illegal expenditures such as expenditure on alcoholic drinks were excluded during the compilation of the Somaliland CPI weights. In addition, due to practical reasons of regular collection of rental charges, imputed rents for owner-occupied dwellings were excluded.

The National approach was used during the computation of the CPI weights. Thus, the weights were compiled according to the "Resident Population" concept. This implies that the household final consumption expenditures were used as reported during the SHS irrespective of where the purchase of the consumable goods and services took place.

The pluto cratic approach was followed during the compilation of the CPI weights. This means that the Somaliland CPI weights were computed as a total aggregated expenditure values rather than average household expenditure proportions. In addition, it also implies that all eligible expenditures for all households were included during the computation of the CPI weights, irrespective of the levels of expenditure whether for the category of the wealthiest or the poorest.

1.2 Cclassification

The classification used during the compilation of the Somaliland weights and the CPI is the Official United Nations Classification of Individual Consumption according to Purpose (COICOP).

1.3 CPI Prices:

Prices used to compute the Somaliland CPI are of three categories. The first category comprises prices of items that are advertised and payable in Somaliland Shillings. Such prices are recorded and used directly to compute the CPI.

The second category, are the prices of items that are advertised and transacted in United States Dollars in a particular outlet. Such prices are converted to the equivalents in the national currency at the open market nominal exchange rate applying on the date of price collection.

The third category provides for the missing prices. Such prices are estimated using the recommended techniques of imputing missing prices

1.4 Calculation of the Index Numbers

The price reference period (base) for the Somaliland CPI is the 2012 calendar year. i.e. from January to December, 2012. This implies that the monthly index calculations started from

January 2013. The Somaliland CPI has been calculated in two stages. The first stage is the computation of the Elementary Aggregate Indices while the second stage is the computation of the Higher Level indices.

1.4.1 Computation of the Elementary Aggregate Indices

The Elementary Aggregate Indices are calculated using the geometric mean (GM) method, commonly referred to as the Jevons index. This is the GM of the un-weighted price relatives. The short term approach is used during the computation of elementary aggregate indices. This is where price ratios or price relatives are computed between the current month and the previous month.

1.4.2 Computation of the Higher Level indices

These are the indices at levels above those of the elementary aggregate indices. They are in hierarchy starting with sub-class indices, class indices, group indices, division indices, food and non-food indices and all items indices. Higher level indices are calculated as a weighted arithmetic means of the indices for all the components within that higher level aggregate. For instance, a sub-class index is calculated as a weighted arithmetic means of all the Elementary Aggregate indices within that sub-class. A class index is calculated as a weighted arithmetic means of all the sub-class indices within that class etc. The construction of these indices is based on a Laspeyres-type Fixed Base Weight Index, being the price of the consumption basket at a given time as a percentage of its price in the base period.

1.5 Computation of the Monthly Inflation (M-o-M)

Monthly Inflation is calculated as the percentage change between the CPI of the current month and the CPI of the previous month.

1.6 Computation of the Annual Inflation (Y-o-Y)

Annual Inflation is calculated as the percentage change between CPI of the current month and the CPI of the same month but for the previous year;
