SOMALILAND CONSUMER PRICE INDEX

Consumer Price Index (CPI) December, 2016

The Central Statistics Department of the Ministry of National Planning & Development (MoNP&D), has released the Consumer Price Index (CPI) for the month of December 2016 (Base year 2012=100)

The Annual Headline Inflation (Y-o-Y) for the year ending December 2016 declined to 0.2 percent while 0.8 percent recorded for the November 2016.

The annual food inflation was registered at 1.3 percent for the ending December 2016 compared 1.1 percent that was recorded for the November 2016. The annual Non-food inflation was recorded at Minus 0.7 percent for the year ended December 2016 compared to 0.7 percent that was recorded for the November 2016.

The **Monthly [M-o-M] Headline Inflation for December 2016** declined by 0.8 percent compared to a 1.1 percent that was registered for the month of November 2016. The monthly food inflation was registered at 1.6 percent while the Non-food inflation was recorded at 0.2 percent.

For more details about historical CPI numbers and the corresponding Inflation see appendix 1: Attached.

Comparison of the CPI of December 2016 with the CPI of December 2015 (Y-o-Y)

The [Y-o-Y] price changes for the divisions with positive annual inflation are as follows: "Food and Non-Alcoholic Beverages by 1.9 percent"; "Housing, Water, Electricity, Gas and Other Fuels by 4.5 percent". "Furnishings, Household Equipment and Routine Household Maintenance 4.8 percent"; "Health 25.6 percent"; "Communication by 5.6 percent"; "Education by 8.1 percent; Restaurants and Hotels by 4.3 percent

On contrary, the annual [Y-o-Y] price changes for the divisions that registered annual inflation below zero percent are the following: Alcoholic Beverages, Tobacco and Narcotics by minus 4.5 percent "Clothing and Footwear" minus 1.1 percent; "Transport" minus 25.1 percent; "Recreation and Culture: minus 16.8 percent; ""; and "Miscellaneous goods and services" minus 0.9 percent".

Comparison of the CPI of November 2016 with the CPI of December 2016 (M-o-M)

An analysis on [M-o-M] basis of CPI for December 2016 compared with that of November 2016, shows that there are ten divisions, whose prices have generally increased, while the remaining two divisions their prices have generally declined during the month of December 2016, as listed below:

Divisions whose prices have risen up are: "Food and Non-Alcoholic Beverages by 1.9 percent"; Alcoholic Beverages, Tobacco and Narcotics" 6.2 percent; Clothing and Footwear" 2.0 percent; "Housing, Water, Electricity, Gas and Other Fuels" 0.6 percent; "Furnishings, Household Equipment and Routine Household Maintenance" 1.8 percent ";Health" 15.4 percent "Communication" 0.2 percent; Recreation and Culture" 3.5 percent"; "Education" 2.7 percent, ", and "Miscellaneous Goods and Services" 1.4 percent.

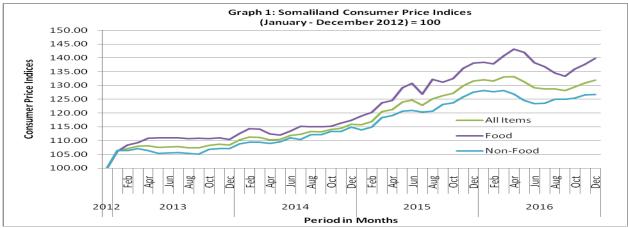

Divisions whose prices have dropped during the month are: "Transport" minus 15.9 percent; "Restaurants and Hotels" minus 0.6 percent

Table 1 Base year 2012=100

COICOP Codes	Major Categories and Divisions	CPI Weights 2012 Calendar Year		dex Numbers	Inflation (Percentage Change) December 2016			
			December 2015	November 2016	December 2016	Y-o-Y (Annual)	M-o-M (Monthly)	
	All Items (Headline)	1,000.0000	131.63	130.83	131.83	0.2	0.8	
	Food	387.1043	138.06	137.65	139.89	1.3	1.6	
	Non-Food	612.8957	127.57	126.52	126.74	-0.7	0.2	
01	Food and Non- Alcoholic Beverages	417.4920	137.65	138.13	140.26	1.9	1.5	
02	Alcoholic Beverages, Tobacco and Narcotics	45.5716	167.45	150.59	159.93	-4.5	6.2	
03	Clothing and Footwear	57.3343	126.74	122.92	125.32	-1.1	2.0	
04	Housing, Water, Electricity, Gas and Other Fuels	141.0220	133.37	138.59	139.43	4.5	0.6	
05	Furnishings, Household Equipment and Routine Household Maintenance	55.4872	119.13	122.68	124.89	4.8	1.8	
06	Health	25.5464	121.31	132.03	152.33	25.6	15.4	
07	Transport	88.5129	118.35	105.36	88.63	-25.1	-15.9	
08	Communication	29.9332	117.93	124.27	124.55	5.6	0.2	
09	Recreation and Furniture	22.4557	121.96	97.97	101.42	-16.8	3.5	
10	Education	36.8795	117.33	123.53	126.83	8.1	2.7	
11	Restaurants and Hotels	33.5201	111.83	117.33	116.65	4.3	-0.6	
12	Miscellaneous Goods and Services	46.2451	128.21	125.32	127.06	-0.9	1.4	

Graph 1: Somaliland Consumer Price Indices

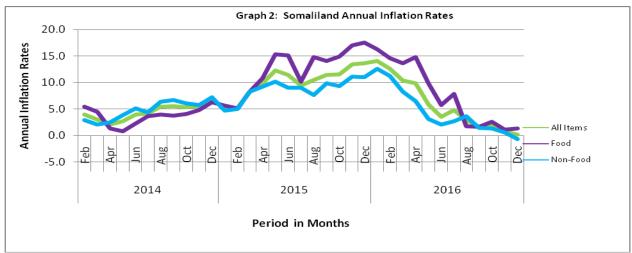

Graph 1 shows that price levels for food are still higher than those for non-food category through the entire period of index measurement. i.e. from January 2013 to December 2016 notwithstanding a persistent drop in the food prices during the months of May, June, July, August and December 2016.

Source: Central Statistics Department, Ministry of National Planning and Development

Graph 2: Somaliland Annual Inflation Rates

Graph 2 also demonstrates that for the entire period i.e. December 2015 to December 2016 food prices were instable compared to non-food prices. Food prices changed more frequently and sharply mostly due the seasonal factors.

EXPLANATORY NOTES

1.1 CPI Weights:

The results of the 2012 Somaliland Household Survey (SHS) were used as a major source of data to compute weights for the Somaliland Consumer Price Index (CPI). The 2012 SHS was designed in such a way that household data was collected from the entire Somaliland. However, only the household final consumption expenditure data for the Hargeisa domain were analysed and used to compute the Somaliland CPI weights. This is due to the limited availability of resources.

The Somaliland CPI weights are based on the principal of Household Final Consumption (HFC) expenditure for Hargeisa. Both Monetary and non-monetary household final consumption were included during the computation of the Somaliland CPI weights.

The exclusion approach was used during the compilation of the Somaliland CPI weights. Thus, all illegal expenditures such as expenditure on alcoholic drinks were excluded during the compilation of the Somaliland CPI weights. In addition, due to practical reasons of regular collection of rental charges, imputed rents for owner-occupied dwellings were excluded.

The National approach was used during the computation of the CPI weights. Thus, the weights were compiled according to the "Resident Population" concept. This implies that the household final consumption expenditures were used as reported during the SHS irrespective of where the purchase of the consumable goods and services took place.

The pluto cratic approach was followed during the compilation of the CPI weights. This means that the Somaliland CPI weights were computed as a total aggregated expenditure values rather than average household expenditure proportions. In addition, it also implies that all eligible expenditures for all households were included during the computation of the CPI weights, irrespective of the levels of expenditure whether for the category of the wealthiest or the poorest.

1.2 Cclassification

The classification used during the compilation of the Somaliland weights and the CPI is the Official United Nations Classification Of Individual Consumption according to Purpose (COICOP).

1.3 CPI Prices:

Prices used to compute the Somaliland CPI are of three categories. The first category comprises prices of items that are advertised and payable in Somaliland Shillings. Such prices are recorded and used directly to compute the CPI.

The second category, are the prices of items that are advertised and transacted in United States Dollars in a particular outlet. Such prices are converted to the equivalents in the national currency at the open market nominal exchange rate applying on the date of price collection.

The third category provides for the missing prices. Such prices are estimated using the recommended techniques of imputing missing prices

1.4 Calculation of the Index Numbers

The price reference period (base) for the Somaliland CPI is the 2012 calendar year. i.e. from January to December, 2012. This implies that the monthly index calculations started from January 2013. The Somaliland CPI has been calculated in two stages. The first stage is the computation of the Elementary Aggregate Indices while the second stage is the computation of the Higher Level indices.

1.4.1 Computation of the Elementary Aggregate Indices

The Elementary Aggregate Indices are calculated using the geometric mean (GM) method, commonly referred to as the Jevons index. This is the GM of the un-weighted price relatives. The short term approach is used during the computation of elementary aggregate indices. This is where price ratios or price relatives are computed between the current month and the previous month.

1.4.2 Computation of the Higher Level indices

These are the indices at levels above those of the elementary aggregate indices. They are in hierarchy starting with sub-class indices, class indices, group indices, division indices, food and non-food indices and all items indices. Higher level indices are calculated as a weighted arithmetic means of the indices for all the components within that higher level aggregate. For instance, a sub-class index is calculated as a weighted arithmetic means of all the Elementary Aggregate indices within that sub-class. A class index is calculated as a weighted arithmetic means of all the sub-class indices within that class etc... The construction of these indices is based on a Laspeyres-type Fixed Base Weight Index, being the price of the consumption basket at a given time as a percentage of its price in the base period.

1.5 Computation of the Monthly Inflation (M-o-M)

Monthly Inflation is calculated as the percentage change between the CPI of the current month and the CPI of the previous month.

1.6 Computation of the Annual Inflation (Y-o-Y)

Annual Inflation is calculated as the percentage change between CPI of the current month and the CPI of the same month but for the previous year;
